

GROSS RESERVOIR EXPANSION PROJECT

Tree Removal Pre-Proposal Information Session

Denver Water invites forestry management and tree removal contractors to a virtual information session on upcoming tree removal at Gross Reservoir.

The Gross Reservoir Expansion Project will raise Gross Dam by 131 feet, almost tripling the storage capacity of the reservoir.

Before filling the reservoir to the new high-water level, trees within the future 415-acre inundation area must be removed.

Denver Water will be hosting a virtual presentation prior to releasing a Request for Qualifications (RFQ) in the Fall of 2024. The virtual presentation will cover:

- Project background and major scope items.
- Denver Water's contracting and procurement process and timing.
- Preferred contractor qualifications.

Virtual Presentation Date

Sept. 26 at 1 p.m.

Please contact Garrett Chesonis at
Garrett.Chesonis@DenverWater.org
to RSVP.

Please note that attending the virtual presentation is not required to respond to the RFQ but is highly recommended.
